Final run
census, orthology, operons
Pipeline run
nine appendicularian genomes
Appendicularian profiles
tested on held-out assemblies
Comparison with the baseline
curated O. dioica genes
Candidates
rules fixed in advance; baseline update
Targeted searches
extended profiles, tblastn absence tests
until a round adds
no O. dioica gene
each round recorded in
the Git repository
UGA/SECIS screens
transcripts, genomes, comparative
Gene models from transcripts
gold standard, annotation fixes
SECIS model
trained on gold-standard 3′ regions
