
A consensus structure of the 76 seeds
canonical pairs (seeds)
0.50 0.75 1.00
seeds (bits)
model (bits)
1 UGA 2 AAA 3 3 3 2 GA 1
consensus position 1-66 (helices 1, 2, 3 coloured; core motifs black)
D orthologous SECIS, 19 genes, 3 assemblies
observed
random new base(s)
changes from a canonical pair that keep a canonical pair
p = 5.5e-05
p = 0.0015
18/27
10/11
single change
double change
positions that differ: paired 18%, core motifs 0%, other unpaired 28%
B diversity of the seeds
all 76 seeds: 2,850 pairs
38 O. dioica seeds of 17 genes:
25 pairs of orthologs
pairs of seeds
identity (consensus positions)
C canonical pairs at each base pair
seeds (76)
helix 1
helix 2
helix 3
decoys: best hits in shuffled windows
(76 hits, 12.6 to 25.2 bits)
